EMC Information

FEDERAL COMMUNICATIONS COMMISSION INTERFERENCE STATEMENT: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

The device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

Warning: Operation of this equipment in a residential environment could cause radio interference.

Suggestion: Shielded twisted pair (STP) cables must be used with the unit to ensure compliance with FCC & CE standards.

Achtung: Der Gebrauch dieses Geräts in Wohnumgebung kann Funkstörungen verursachen.

KCC Statement

유선 제품용 / A 급 기기 (업무용 방송 통신 기기)
이 기기는 업무용 (A 급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며 , 가정 외의 지역에서 사용하는 것을 목적으로 합니다 .

RoHS

This product is RoHS compliant.

User Notice

All information, documentation, and specifications contained in this manual are subject to change without prior notification by the manufacturer. The manufacturer makes no representations or warranties, either expressed or implied, with respect to the contents hereof and specifically disclaims any warranties as to merchantability or fitness for any particular purpose. Any of the manufacturer's software described in this manual is sold or licensed *as is*. Should the programs prove defective following their purchase, the buyer (and not the manufacturer, its distributor, or its dealer), assumes the entire cost of all necessary servicing, repair and any incidental or consequential damages resulting from any defect in the software.

The manufacturer of this system is not responsible for any radio and/or TV interference caused by unauthorized modifications to this device. It is the responsibility of the user to correct such interference.

The manufacturer is not responsible for any damage incurred in the operation of this system if the correct operational voltage setting was not selected prior to operation. PLEASE VERIFY THAT THE VOLTAGE SETTING IS CORRECT BEFORE USE.

Package Contents

The CE750A package consists of:

- ◆ 1 CE750AL USB KVM Extender (Local Unit)
- ◆ 1 CE750AR USB KVM Extender (Remote Unit)
- ◆ 1 Custom KVM Cable Set
- ◆ 2 Power Adapters
- ◆ 1 Mounting Kit
- ◆ 1 User Instructions

Check to make sure that all the components are present and that nothing got damaged in shipping. If you encounter a problem, contact your dealer.

Read this manual thoroughly and follow the installation and operation procedures carefully to prevent any damage to the unit, and/or any of the devices connected to it.

* Features may have been added to the CE750A since this manual was printed. Please visit our website to download the most up-to-date version of the manual.

About this Manual

This User Manual is provided to help you get the most from your system. It covers all aspects of installation, configuration and operation. An overview of the information found in the manual is provided below.

Chapter 1, Introduction, introduces you to the CE750A system. Its purpose, features and benefits are presented, and its front and back panel components are described.

Chapter 2, Hardware Setup, describes the steps that are necessary to quickly and safely set up your installation.

Chapter 3, Operation, explains the fundamental concepts involved in operating the CE750A.

An Appendix, provides specifications and other technical information regarding the CE750A.

Conventions

This manual uses the following conventions:

- | | |
|---|--|
| Monospaced | Indicates text that you should key in. |
| [] | Indicates keys you should press. For example, [Enter] means to press the Enter key. If keys need to be chorded, they appear together in the same bracket with a plus sign between them: [Ctrl+Alt]. |
| 1. | Numbered lists represent procedures with sequential steps. |
| ◆ | Bullet lists provide information, but do not involve sequential steps. |
| → | Indicates selecting the option (on a menu or dialog box, for example), that comes next. For example, Start → Run means to open the <i>Start</i> menu, and then select <i>Run</i> . |
|  | Indicates critical information. |

Product Information

Chapter 1

Introduction

Overview

The CE750A is a USB (Universal Serial Bus) based KVM Extender with automatic signal compensation and RS-232 serial functionality that allows access to a computer system from a remote USB console (USB keyboard, monitor, and USB mouse).

Because it allows access to a computer system from a remote console, the CE750A is perfect for use in any type of installation where you need to place the console where it is conveniently accessible, but you want the system equipment to reside in a safe location – away from the dust and dirt of the factory floor, or the harsh environmental influence of a construction site, for example.

The CE750A is also useful for control and security purposes, where you can have the system unit in a secure area at the same time that you put the console in the most convenient location for user access. This is ideal for managing highly confidential data systems.

The CE750A improves on previous designs by: 1) the addition of an RS-232 port, on both the Local and Remote Units – the RS-232 port on the Local Unit allows you to connect to a serial terminal for configuration, while the RS-232 port on the Remote Unit allows you to connect serial devices such as touchscreens and barcode scanners; 2) the addition of a dedicated KVM port section on the Local Unit so you can simply and easily include a KVM switch in your installation; 3) using inexpensive Cat 5e cable instead of bulkier, more expensive, standard cables, for a much neater, more convenient, more reliable data transfer connection; 4) its ability to sense the distance to the system and automatically adjust the gain accordingly; and 5) featuring a custom ASIC to ensure the utmost in reliability and compatibility.

Further CE750A key features are built-in 8KV/15KV ESD protection and 2KV surge protection, and picture compensation pushbuttons on the Remote Unit to adjust the picture on the remote console.

Setup is as easy as can be – simply connect the computer system box and local console to the Local CE750AL Unit; run the Cat 5e cable to the Remote CE750AR Unit (up to 150 meters away); and plug the remote console into the Remote Module.

Features

- ◆ Local and Remote Units connect at distances up to 150 m using Cat 5e cable.
- ◆ Dual console operation – control your system from both the local and remote USB keyboard, monitor, and mouse consoles
- ◆ Built-in ASIC for greater reliability and compatibility
- ◆ Auto Signal Compensation (ASC)
- ◆ USB Keyboard and USB Mouse Ports
- ◆ RS-232 serial ports – allows you to connect to a serial terminal for configuration (Local Unit), or serial devices such as touchscreens and barcode scanners (Remote Unit)
- ◆ Supports stereo speakers and stereo microphone
- ◆ USB overcurrent detection and prevention
- ◆ Pushbutton operating mode selection (Local Unit only) – select between Local and Auto operating modes.
- ◆ Built-in 8KV/15KV ESD protection (Contact voltage 8KV; Air voltage 15KV) and 2KV surge protection
- ◆ Adjustable gain control – automatically and manually adjusts signal strength to compensate for distance
- ◆ High resolution video – up to 1920 x 1200@60Hz (30 m); 1600 x 1200@60Hz (150 m); 1280 x 1024@60Hz (200 m)
- ◆ Supports VGA, SVGA, SXGA (1280 x 1024) and UXGA (1600 x 1200) and multisync monitors; local monitor supports DDC; DDC2; DDC2B
- ◆ Hot pluggable
- ◆ Rack mountable
- ◆ Easy to install – no software required – connecting cables to the devices is all it takes
- ◆ Supports Wide Screen formats*

Note: The EDID data for a widescreen is sent from the local video output port. For widescreen modes and displays connect the monitor to the local video output port or use an ATEN EDID emulator.

Requirements

Consoles

- ◆ A VGA, SVGA, SXGA, UXGA, or multisync monitor capable of the highest resolution that you will be using on any computer in the installation*
- ◆ A USB keyboard**
- ◆ A USB mouse***

-
- Note:**
1. If you connect a DDC type monitor to the Local Unit, the monitor that connects to the Remote Unit must be able to support the highest video resolution that the DDC monitor can provide
 2. You can use different brands and models of USB keyboard on the Local and Remote Units, but support for multi-function keyboards is limited to the standard 104 keys.
 3. You can use different brands and models of mouse on the Local and Remote Units, but only the left and right mouse buttons and scroll wheel features are supported. Other mouse features are not supported.
-

Computers

The following equipment must be installed on each computer that is to be connected to the system:

- ◆ A VGA, SVGA, SXGA, UXGA, or multisync card.
- ◆ USB host controller and Type A USB port.

Cables

- ◆ For optimal signal integrity, and to simplify the layout, we strongly recommend that you use the high quality custom KVM cable set that is provided with this package.
- ◆ Cat 5e cable is the minimum required to connect the Local and Remote CE750A Units. Cable of a lower standard will result in degrading of the video signal. For best performance, we strongly recommend Cat 5e cable.

Operating Systems

Supported operating systems are shown in the table, below:

OS		Version
Windows		2000 and higher
Linux	RedHat	7.1 and higher
	SuSE	9.0 and higher
	Mandriva (Mandrake)	9.0 and higher
UNIX	FreeBSD	4.2 and higher
Novell	Netware	6.0 and higher

Components

CE750AL (Local Unit) Front View

No.	Component	Description
1	KVM Port Section	If you are combining the CE750A with a KVM switch, the custom KVM cable set that links to the respective ports on the Console section of the switch plugs into these ports.
2	RS-232 Serial Port	This RS-232 serial port is for connecting to a serial terminal for configuration.
3	Operating Mode Pushbutton	This pushbutton toggles between the Operating Modes available from the Local Console: <ul style="list-style-type: none"> ◆ Local – only the Local Console can control the system(s). ◆ Auto – both the Local and Remote Consoles can control the system. <p>Note: The default operating mode is <i>Auto</i>. See <i>Operating Modes</i>, page 17, for full details.</p>
4	LEDs	The CE750AL has two LEDs to indicate the operating status of the Local (CE750AL) and Remote (CE750AR) Units. See <i>LED Display</i> , page 20, for full details.

CE750AR (Remote Unit) Front View

No.	Component	Description
1	RS-232 Serial Port	RS-232 serial devices – such as touchscreens or barcode scanners – plug into this port.
2	Picture Compensation Pushbuttons	These pushbuttons adjust the video quality of the remote console. See <i>Picture Compensation</i> , page 19 for details.
3	Picture Compensation LED	Flashes to indicate that video quality has been adjusted.
4	LEDs	The CE750AR has two LEDs to indicate the operating status of the Local (CE750AL) and Remote (CE750AR) Units. See <i>LED Display</i> , page 20.

CE750AL / CE750AR Rear View

Side View

No.	Component	Description
1	Power Jack	The cable from the DC Power adapter connects here.
2	Audio Ports	These mini stereo ports are for the speakers (green) and microphone (pink).
3	Remote I/O	The Cat 5e cable that connects the Remote and Local Units plugs in here.
4	Console Ports	The Local and Remote console's keyboard, monitor, and mouse plug into these ports.
5	Grounding Terminal	The grounding wire (used to ground the unit) attaches here. See <i>Grounding</i> , page 11, for further details.

This Page Intentionally Left Blank

Chapter 2

Hardware Setup

1. Important safety information regarding the placement of this device is provided on page 21. Please review it before proceeding.
2. Make sure that the power to all devices connected to the installation are turned off. You must unplug the power cords of any computers that have the Keyboard Power On function.

Rack Mounting

For convenience and flexibility, the CE750AL and CE750AR can be mounted on system racks. To rack mount a unit do the following:

1. Using the screws provided in the Rack Mount Kit, screw the mounting bracket into the top or bottom of the unit as show in the diagram below:

2. Screw the bracket into any convenient location on the rack.

Note: These screws are not provided. We recommend that you use M5 x 12 Phillips Type I cross, recessed type screws.

Installation

Grounding

To prevent damage to your installation it is important that all devices are properly grounded.

1. Use two grounding wires to ground both units by connecting one end of the wire to the grounding terminal, and the other end of the wire to a suitable grounded object.

2. Make sure that the computer that the CE750AL connects to and the monitor that the CE750AR connects to are properly grounded.

3. For increased grounding protection, use STP (shielded twisted pair) cable to connect the Local and Remote Units. There are two methods that can be used:

a) In addition to the eight paired wires, STP cable also contains a grounding wire. Solder this wire to the RJ-45 connector as shown in the diagram below:

b) The second method is to use the STP cable shielding for grounding. In this case, make sure that the shielding makes tight contact with the top inside of the RJ-45 connector as shown in the diagram below:

In either case, make sure that the sides of the RJ-45 connector make tight contact with the grounding contacts on the sides of the RJ-45 socket as shown in the diagram below:

Setting Up

Setting up the CE750A USB KVM Extender system is simply a matter of plugging in the cables. Make sure that all the equipment to be connected up is powered Off. Refer to the installation diagram on the following page and do the following:

1. Plug the cables from the local console devices (mouse, keyboard, monitor, microphone, speakers) into their ports on the Console section on the rear of the Local Unit (CE750AL). Each port is marked with an appropriate icon to indicate itself.
2. Plug the appropriate connectors on the custom KVM cable set supplied with this unit into their ports on the CPU section on the front of the Local Unit (CE750AL).
3. Plug the connectors on the other end of the custom KVM cable set into the appropriate ports on the local computer. Each connector is marked with an appropriate icon to indicate which it is.

Note: If you are combining the CE750A with a KVM switch, the other end of the custom KVM cable set plugs into the appropriate ports on the KVM switch.

4. For control of serial devices, connect the RS-232 serial port on the local unit to a serial port on the local computer.
5. Plug either end of the Cat 5e cable into the CE750AL's Remote I/O port. Plug the other end of the Cat 5e cable into the I/O port of the Remote Unit (CE750AR).
6. Plug one of the power adapters (supplied with this package) into an AC source; plug the adapter's power cable into the CE750AL's Power Jack
7. Plug the cables from the remote console devices (mouse, keyboard, monitor, speakers, microphone), into their ports on the Console side of the CE750AR.
8. Plug the second power adapter (supplied with this package) into an AC source; plug the adapter's power cable into the CE750AR's Power Jack.

Installation Diagrams

Chapter 3

Operation

Operating Modes

The CE750A USB KVM Extender has three operating modes: Local, Auto, and Remote, as described in the table below:

Mode	Description
Local	Only the local console has KVM access. The remote console's keyboard, video, and mouse input is disabled.
Auto	Both the local and remote consoles can have KVM access, but not at the same time. The console without access has to wait until the console with access stops inputting data before it can gain access.
Remote	The remote console has KVM access. Remote mode can only occur when the pushbutton on the CE750AL is set to <i>Auto</i> and the local console is idle. See note at the top of page 18

Note: The default operating mode is *Auto*.

Mode Selection

The *Operating Mode Pushbutton*, located on the CE750AL's front panel, controls the operating mode of the CE750A USB KVM Extender system. Pressing the switch toggles through *Local* and *Auto* operating modes.

Note: Remote mode cannot be selected. The remote console can get control only when the Operating Mode Pushbutton on the CE750AL is toggled to *Auto* and the local console is idle. If the remote console is then idle for more than five seconds, the local console can gain access.

Picture Compensation

The CE750A supports automatic and manual video adjustment.

- ◆ **Automatic adjustment**

The CE750A features ACS (Auto Signal Compensation), which automatically adjusts the video and stores the settings. To activate the automatic adjustment, press the **Picture Compensation Pushbuttons** on the front panel together for 5 seconds.

- ◆ **Manual adjustment**

To fine tune the video signal, use the **Picture Compensation Pushbuttons** on the front panel of the remote CE750A to increase and/or decrease the compensation. The picture compensation LED flashes as the system adjusts its video gain, and lights steadily when the adjustment is complete and saved.

LED Display

The CE750A Local and Remote Units have front panel LEDs to indicate their operating status, as shown in the tables, below:

CE750AL (Local Unit)

LED	Operating Mode	
	Local	Auto
Local (Green)	Lights to indicate that the local console is active (the Remote LED is off).	Lights when the local console is active (the Remote LED is off). Turns off when the remote console is active (the Remote LED turns on). Flashes on and off alternately with the Remote LED when neither console is active.
Remote (Green)	The LED is off	Lights when the remote console is active (the Local LED is off). Turns off when the local console is active (the Local LED turns on). Flashes on and off alternately with the Local LED when neither console is active.

CE750AR (Remote Unit)

LED	Indication
Link (Green)	Lights steadily to indicate that the connection to the Local Unit is ok. Flashes when there is a problem with the connection to the Local Unit and Remote LED is off.
Remote (Green)	Lights when the remote console is active. Is off when the local console is active or when there is a problem with the connection to the Local Unit. Flashes to indicate that the system is in Auto Mode.
Picture Compensation (Orange)	Flashes when a Picture Compensation pushbutton has been pushed (+ or -) and the CE750A is adjusting the video gain. Lights steadily to indicate that video gain adjustment has been completed and saved.

Safety Instructions

General

- ◆ Read all of these instructions. Save them for future reference.
- ◆ Follow all warnings and instructions marked on the device.
- ◆ Do not place the device on any unstable surface (cart, stand, table, etc.). If the device falls, serious damage will result.
- ◆ Do not use the device near water.
- ◆ Do not place the device near, or over, radiators or heat registers.
- ◆ The device cabinet is provided with slots and openings to allow for adequate ventilation. To ensure reliable operation, and to protect against overheating, these openings must never be blocked or covered.
- ◆ The device should never be placed on a soft surface (bed, sofa, rug, etc.) as this will block its ventilation openings. Likewise, the device should not be placed in a built in enclosure unless adequate ventilation has been provided.
- ◆ Never spill liquid of any kind on the device.
- ◆ Unplug the device from the wall outlet before cleaning. Do not use liquid or aerosol cleaners. Use a damp cloth for cleaning.
- ◆ The device should be operated from the type of power source indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.
- ◆ The device is designed for IT power distribution systems with 230V phase-to-phase voltage.
- ◆ To prevent damage to your installation, it is important that all devices are properly grounded.
- ◆ The device is equipped with a 3-wire grounding type plug. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not attempt to defeat the purpose of the grounding-type plug. Always follow your local/national wiring codes.
- ◆ Do not allow anything to rest on the power cord or cables. Route the power cord and cables so that they cannot be stepped on or tripped over.

- ◆ If an extension cord is used with this device make sure that the total of the ampere ratings of all products used on this cord does not exceed the extension cord ampere rating. Make sure that the total of all products plugged into the wall outlet does not exceed 15 amperes.
- ◆ To help protect your system from sudden, transient increases and decreases in electrical power, use a surge suppressor, line conditioner, or un-interruptible power supply (UPS).
- ◆ Position system cables and power cables carefully; Be sure that nothing rests on any cables.
- ◆ Never push objects of any kind into or through cabinet slots. They may touch dangerous voltage points or short out parts resulting in a risk of fire or electrical shock.
- ◆ Do not attempt to service the device yourself. Refer all servicing to qualified service personnel.
- ◆ If the following conditions occur, unplug the device from the wall outlet and bring it to qualified service personnel for repair.
 - ◆ The power cord or plug has become damaged or frayed.
 - ◆ Liquid has been spilled into the device.
 - ◆ The device has been exposed to rain or water.
 - ◆ The device has been dropped, or the cabinet has been damaged.
 - ◆ The device exhibits a distinct change in performance, indicating a need for service.
 - ◆ The device does not operate normally when the operating instructions are followed.
- ◆ Only adjust those controls that are covered in the operating instructions. Improper adjustment of other controls may result in damage that will require extensive work by a qualified technician to repair.
- ◆ Do not connect the RJ-11 connector marked “UPGRADE” to a public telecommunication network.

Rack Mounting

- ◆ Before working on the rack, make sure that the stabilizers are secured to the rack, extended to the floor, and that the full weight of the rack rests on the floor. Install front and side stabilizers on a single rack or front stabilizers for joined multiple racks before working on the rack.
- ◆ Always load the rack from the bottom up, and load the heaviest item in the rack first.
- ◆ Make sure that the rack is level and stable before extending a device from the rack.
- ◆ Use caution when pressing the device rail release latches and sliding a device into or out of a rack; the slide rails can pinch your fingers.
- ◆ After a device is inserted into the rack, carefully extend the rail into a locking position, and then slide the device into the rack.
- ◆ Do not overload the AC supply branch circuit that provides power to the rack. The total rack load should not exceed 80 percent of the branch circuit rating.
- ◆ Make sure that all equipment used on the rack – including power strips and other electrical connectors – is properly grounded.
- ◆ Ensure that proper airflow is provided to devices in the rack.
- ◆ Ensure that the operating ambient temperature of the rack environment does not exceed the maximum ambient temperature specified for the equipment by the manufacturer.
- ◆ Do not step on or stand on any device when servicing other devices in a rack.

Technical Support

Troubleshooting

Overview

Operation problems can be due to a variety of causes. The first step in solving them is to make sure that all cables are securely attached and seated completely in their sockets.

Problem	Action
No video	Make sure that all cables are securely plugged into their sockets.
Poor quality video	The video quality can be improved by using the Picture Compensation pushbuttons on the CE750AR to increase or reduce the video signal gain.
	The video quality can be improved by reducing the refresh rate.

About SPHD Connectors

This product uses SPHD connectors for its KVM and/or Console ports. We have specifically modified the shape of these connectors so that only KVM cables that we have designed to work with this product can be connected.

Limited Warranty

ATEN warrants its hardware in the country of purchase against flaws in materials and workmanship for a Warranty Period of two [2] years (warranty period may vary in certain regions/countries) commencing on the date of original purchase. This warranty period includes the LCD panel of ATEN LCD KVM switches. Select products are warranted for an additional year (see *A+ Warranty* for further details). Cables and accessories are not covered by the Standard Warranty.

What is covered by the Limited Hardware Warranty

ATEN will provide a repair service, without charge, during the Warranty Period. If a product is defective, ATEN will, at its discretion, have the option to (1) repair said product with new or repaired components, or (2) replace the entire product with an identical product or with a similar product which fulfills the same function as the defective product. Replaced products assume the warranty of the original product for the remaining period or a period of 90 days, whichever is longer. When the products or components are replaced, the replacing articles shall become customer property and the replaced articles shall become the property of ATEN.

To learn more about our warranty policies, please visit our website:

<http://www.aten.com/global/en/legal/policies/warranty-policy/>
